2013 Webinar Series
State of the Science:
Dementia Evaluation and Management
Among Diverse Older Adults and Their Families

Please mute your Headset!!

Sponsored by Stanford Geriatric Education Center in conjunction with American Geriatrics Society, California Area Health Education Centers, & Community Health Partnership

Please visit our website for more information - http://sgec.stanford.edu/
CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

Rita Hargrave M.D.
Geriatric Psychiatrist
Martinez VA Medical Center

Mar 6 2013

Q & A after the presentation

- We will reserve time at the end of the presentation for questions. If you have any questions, please use the “Chat” feature located on the right side of your screen. Please send your chat to everyone if possible.

- After the Q and A, we would like to ask each of the participants to answer the short evaluation questionnaire.

Please complete our short survey. We appreciate your feedback.

NOTE: Continuing Education Participants must complete a final survey in order to receive CEU/CME credit

“Cultural Aspects of the Pharmacological Management of Dementia”

Community Health Partnership CME Committee Members Disclosure Statements:
Continuing Medical Education committee members and those involved in the planning of this CME Event have no financial relationships to disclose.

Stanford Geriatric Education Center Webinar Series Planner Disclosure Statements:
The following members of the Stanford Geriatric Education Center Webinar Series Committee have indicated they have no conflicts of interest to disclose to the learners: Gwen Yeo, Ph.D. and Kala M. Malha, DSc, MPH

Faculty Disclosure Statement:
I have no financial relationships to disclose and I will not discuss off label use and/or investigational use in my presentation.

About the Presenter

Rita Hargrave M.D., F.AP.A.

Rita Hargrave M.D. is geriatric psychiatrist at the Veteran’s Administration Martinez Outpatient Mental Health Clinic and consulting psychiatrist for the University of California, Davis Alzheimer’s Disease Center. She is an instructor at the University of California, Davis Department of Psychiatry.

She serves as the Chair of the ABPN Committee for Certification and Recertification in Geriatric Psychiatry. She is a member of the core faculty of the Stanford Geriatric Education Center. For many years she has been a prolific contributor to journals, magazines and books exploring neuropsychiatry, cross-cultural psychiatry and ethnic minority caregivers.

She founded www.ethnicelderscare.net, a website focused on ethnicity and dementia.
CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

KEY-POINTS

There are genetic and biological factors that affect the efficacy of the pharmacological management of dementia
There psychological and social factors that affect the efficacy of the pharmacological management of dementia
KEEP YOUR EYES AND EARS OPEN
BE PATIENT

“The prescription and use of medication fundamentally involves a social transaction that carries both symbolic and social meanings based on the interactions between the patient, doctor and their social environment”

CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

- Majority of studies done in the 1970-1980’s without current gene mapping technology
- Older adults were not included in these studies
- Sample size of participants was often small (<20)

OUTLINE

- Genetic Factors
  - Drug Metabolizing Enzymes
  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences
  - Cognitive Enhancer Ethnic Differences
- Non-Genetic Factors
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications
  - Diet and Habits
  - Alternative Health Practices
CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

• Genetic Factors
  ◦ Drug Metabolizing Enzymes
  ◦ Antidepressant Ethnic Differences
  ◦ Antipsychotic Ethnic Differences
  ◦ Benzodiazepine Ethnic Differences
  ◦ Cognitive Enhancers Differences

DRUG METABOLIZING ENZYMES

• Enzymes most studied are the Cytochrome P450 group
  ◦ More than 20 isoenzymes each encoded with a different gene
  ◦ Key component in the oxidation of numerous psychopharmacological agents
• Most drug metabolism involves CYP1, CYP2, CYP3
• Inter-individual and inter-ethnic differences can range from 5 fold in CYP3A4 to 20 fold for CYP2D6
DRUG METABOLIZING ENZYMES

- Metabolic Subgroups
  - Utra-rapid Metabolizer (UM)
  - Normal or Extensive metabolizer (EM)
  - Intermediate Metabolizer (IM)
  - Poor Metabolizer (PM)

<table>

Antidepressant Ethnic Differences
Antipsychotic Ethnic Differences
Benzodiazepine Ethnic Differences
Cognitive Enhancer Ethnic Differences

Non-Genetic Factors
Cultural Formulation Interview
Cultural and Attitudes to Medications
Diet and Habits
Alternative Health Practices

ANTIDEPRESSION ETHNIC DIFFERENCES

Asian subjects have a increased likelihood of having genetic background that results in lower metabolic clearance of medications handled by CYP enzymes

Standard doses may result in higher serum concentrations, higher sensitivity to short and long-term side-effects
ANTIDEPRESSANT ETHNIC DIFFERENCES

Higher plasma concentrations after single dose administration has been reported compared to Caucasians for

- Nortriptyline (Japanese)
- Venlafaxine (Japanese)
- Desipramine (Chinese)

No difference reported when compared to Caucasians for

- Sertraline (Chinese)
- Nortryptiline (Hispanics)

ANTIPSYCHOTIC ETHNIC DIFFERENCES

Genetic Factors

- Drug Metabolizing Enzymes
- Antidepressant Ethnic Differences
- Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences
  - Cognitive Enhancer Ethnic Differences
ANTIPSYCHOTIC METABOLIC DIFFERENCES

  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences
  - Cognitive Enhancer Ethnic Differences
- **Non-Genetic Factors**
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications
  - Diet and Habits
  - Alternative Health Practices
ANTIPSYCHOTIC ETHNIC DIFFERENCES

<table>
<thead>
<tr>
<th>Antipsychotic</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Haldol</td>
<td>Higher doses prescribed in AA, Higher rates of side-effects reported in Chinese, Japanese, Koreans in US</td>
</tr>
<tr>
<td>Risperidone</td>
<td>Higher % of slow-intermediate metabolizers (2D6) Japanese 40%, Koreans 50%, Chinese 70% African Americans</td>
</tr>
<tr>
<td>Aripiprazole</td>
<td>Similar to risperidone but few studies, metabolically neutral?</td>
</tr>
<tr>
<td>Olanzapine</td>
<td>Little data on metabolic differences Asians are prescribed somewhat lower doses than Caucasians, ^risk for type 2 diabetes in Asians</td>
</tr>
<tr>
<td>Quetiapine</td>
<td>Higher serum levels more likely due to environmental factors</td>
</tr>
</tbody>

CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

- Genetic Factors
  - Drug Metabolizing Enzymes
  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences
  - Cognitive Enhancers Ethnic Differences
- Non-Genetic Factors
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications
  - Diet and Habits
  - Alternative Health Practices
BENZODIAZEPINE ETHNIC DIFFERENCES

- Benzodiazepines used for anxiety, agitation, sleep
- Enzyme CYP 3AS handles clearance of benzos
- Significant inter-ethnic differences
- Clearance is lower in Asians compared to Caucasians
- Particularly relevant is prescribing in conjunction with antipsychotics (olanzapine, clozapine) in concert with Metabolizing Enzymes

CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

- **Genetic Factors**
  - Drug Metabolizing Enzymes
  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences
  - Cognitive Enhancers Ethnic Differences

- **Non-Genetic Factors**
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications

## CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

- **Genetic Factors**
  - Drug Metabolizing Enzymes
  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences
  - Cognitive Enhancers Ethnic Differences

- **Non-Genetic Factors**
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications
  - Diet and Habits
  - Alternative Health Practices
Cultural factors affecting attitudes to psychotropic medications

- Biological
  - Nature of psychopathology
    - Dementia vs normal aging
    - Anxiety vs stress
  - Illness-related neurocognitive impairment
  - Current and past experience with medication response and side-effects

Culturally determined personality traits like dependence-independence, orthodoxy-adventurousness may influence health behaviors such as:

- Help seeking patterns
- Perception of side-effects
- Response to medication
- Treatment adherence
CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

- Genetic Factors
  - Drug Metabolizing Enzymes
  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences

- Non-Genetic Factors
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications
  - Diet and Habits
  - Alternative Health Practices

CULTURAL FORMULATION INTERVIEW
CULTURAL FORMULATION INTERVIEW

- Health beliefs
- Alternative treatments
- Support system
- Explanatory model
- Collaborative relationship

CULTURAL FORMULATION INTERVIEW

- Cultural Formulation Interview, (CFI) is meant to be administered during patients’ initial assessment
- CFI consists of 14 questions such as:
  - “People often understand their problems in their own way, which may be similar or different from how doctors explain the problem. How would you describe your problem to someone else?”
  - “Is there anything about your background, for example your culture, race, ethnicity, religion or geographical origin that is causing problems for you in your current life situation?”
CULTURAL FORMULATION INTERVIEW

- The CFI allows individuals
  - to define their problems as they see fit
  - to make explicit their own explanatory models
  - to relate this to how others within their social networks (including family members and those that don’t share their culture) may see their problems.

CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

- Genetic Factors
  - Drug Metabolizing Enzymes
  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences

- Non-Genetic Factors
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications
  - Diet and Habits
  - Alternative Health Practices

CULTURE AND ATTITUDES TOWARD MEDICATIONS

Cultural factors affecting attitudes to psychotropic medications

- Psychological
  - Illness Explanatory models
  - Lack of medical information
  - Personal meaning of accepting psychiatric treatments (stigma)
Cultural factors affecting attitudes to psychotropic medications

- Sociocultural
  - Stigma of psychiatric illness and treatments
  - Attitudes of family and support network
  - Nature of relationship with mental health team—"Placebo Effect"
  - Preference for traditional treatments

RELATIONSHIP ISSUES
Patient factors

- Negative attitudes or false beliefs about medications
- Lack of medical knowledge, health literacy, psychoeducation
- Illness explanatory models incongruent with clinician’s model
- Lack of social supports
- Cultural/language barriers to care
RELATIONSHIP ISSUES
Clinician factors

- Prescribing practices
  - Haldol, SSRI’s, Donepezil, SGA
- Limited time to explore psychosocial needs and conduct referrals
- Limited time for psychosocial and compliance education
- Limited flexibility to change regime in response to side-effects

CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

- Genetic Factors
  - Drug Metabolizing Enzymes
  - Antidepressant Ethnic Differences
  - Antipsychotic Ethnic Differences
  - Benzodiazepine Ethnic Differences
- Non-Genetic Factors
  - Cultural Formulation Interview
  - Cultural and Attitudes to Medications
  - Diet, Habits, Alternative Treatments
Herbs and CYP3A4

Induction

St. John’s Wort
Herb used for mild depression
Induces CYP3A4 enzymes
Speeds metabolism of medication partners

DIET and CYP3A4

Inhibition
SMOKING

- Decreased blood levels due to induction of liver enzymes
  - Antidepressants (impramine, trazodone)
  - Antipsychotics (haldol, olanzapine)
  - Anxiolytics (xanax, lorazepam, diazepam)

Herbs and CYP 450 enzymes

- Kava Kava
- Herbal treatment for anxiety
- Inhibits numerous CYP 450 enzymes
  - CYP1A2
  - CYP2D6
  - CYP3A4
Cultural Aspects of the pharmacological management of dementia

There are genetic and biological factors that affect the efficacy of the pharmacological management of dementia.

There psychological and social factors that affect the efficacy of the pharmacological management of dementia.

KEEP YOUR EYES AND EARS OPEN

BE PATIENT

CULTURAL ASPECTS OF THE PHARMACOLOGICAL MANAGEMENT OF DEMENTIA

Ethnomed. Integrating Culture into Clinical Practice http://ethnomed.org/

Cultural/Ethnic Diversity in Alzheimer’s
http://www.alz.org/alzwa/in_my_community_13902.asp
ETHNICITY, RACE AND Non-genetic Factors

- **RACE**
  - Largely perceived by appearances and attributed to genetic and biological traits
  - Racial differences maintained because of cultural significance

ETHNICITY, RACE AND CULTURE

- **ETHNICITY**
  - Self/society group construct based on geography, language, religion
  - Race is a component of ethnicity
  - Traditions, values, shared history and generational transmission
  - Ethnic identity is not static and re-shaped by settlements, employment, migration effects

The physician-patient relationship and dynamics of dementia diagnosis live in this dynamic environment.
CULTURE

- Shared system of concepts or mental representations established by convention and maintained by traditional transmission

Q & A

- We now have some time to answer your questions. If you have any questions, please use the “Chat” feature located on the right side of your screen. **Please send your chat to everyone if possible.**
- After the Q and A, We would like to ask each of the participants to answer the short evaluation questionnaire.

**Please complete our short survey, We appreciate your feedback.**

**NOTE: Continuing Education Participants must complete a final survey in order to receive CEU/CME credit**
Final Question
Thank You for Participating!

Reminder: Please complete our short survey.
We appreciate your feedback.

NOTE: Continuing Education Participants must complete a final survey in order to receive CEU/CME credit.
